1. Executive Summary

Firstsource Solutions Limited aims to achieve and maintain the highest standards of Quality, Occupational Health & Safety, Environment and Energy usage, incorporating the principles of sustainable development throughout its worldwide business. FSL identifies the health and safety of its employees, contractors and visitors, the satisfaction of its customers, the protection of the environment and the development of the communities where it has its operations as integrated key drivers of its business; the entire organisation is oriented towards achieving these goals openly and transparently.

2. Introduction

Quality, Occupational Health & Safety, Environment and Energy management and risk assessment fundamentals are integrated in all business processes. Management is responsible and accountable for achieving excellence in Quality, Occupational Health & Safety, Environment and Energy performance for successful business results. FSL is committed to training all its employees in the appropriate use of its Quality, Occupational Health & Safety, Environment and Energy management systems, strengthening its management through updating of professional and managerial skills, fostering diversity, emphasising employee evaluation and motivation. Nothing is more important than the health and safety of everyone who works for us, works with us or visits us. All injuries and work-related illnesses can and must be prevented.

Working safely is a condition of employment. Quality is our main competitive advantage. Requirements and expectations of our customers must be satisfied. We are committed to developing a long-term sustainable business. Preventing pollution and minimising the environmental impact of our operations. Making the most efficient use of natural resources and energy, the business FSL recognises the importance of implementing this policy throughout its Quality, Occupational Health & Safety, Environment and Energy management systems, covering the entire supply chain from suppliers to customers and the proper and efficient use of its products in accordance with their agreed specifications.

FSL commits to comply with applicable legal requirements and all other requirements relating to quality, health & safety, environment and energy issues to which it subscribes. These will be managed within each geography, details of which can be obtained by the geography SPOC.

The objectives and targets identified shall be implemented at a geographical level by drawing a suitable OHSE management program. As a part of potential hazard & impacts identification, the emergency situations shall also be identified to develop the emergency preparedness and response plan. All the employees, including those of the sub-contractors, service providers, vendors shall be trained about the control measures to be adopted to prevent, control, or reduce the relevant potential hazards & environmental impacts.

It will describe management strategies and actions to meet the centre's OHSE objectives.

3. Purpose and Scope

3.1 Purpose

The main purpose of this Global Policy is to be a reference manual to establish the relevant Quality, Occupational Health & Safety, Environmental and Energy standards, procedures, communications and outline management strategies and actions to meet the global and regional objectives.

Each geography has its own integrated management system, consisting of the relevant standards for their geography. The IMS has been created to ensure adherence and certification of standards for the business and for client and prospective client assurance. Detailed geography specific SOP's can be referred to which detail the specific IMS and legislation requirements for each location.

3.2 Scope/ Objective

The scope covered under this document shall comprise of Business Process Outsourcing & support services globally with exceptions approved by the Global CAO without sacrificing reasonable QHSEE standards and legal requirements.

This policy shall refer to the Quality Management Systems and the Energy Management Systems to the following sites

For UK:

Centre Square, Middlesbrough, UK – ISO 50001:2011, ISO 45001:2018, ISO 9001:2015 and ISO 14001:2015

Springtown, Londonderry, UK - , ISO 45001:2018, ISO 9001:2015 and ISO 14001:2015

Space One, London, UK - ISO 50001:2011, ISO 45001:2018, ISO 9001:2015 and ISO 14001:2015

Pontypridd UK - ISO 50001:2011, ISO 45001:2018, ISO 9001:2015 and ISO 14001:2015

For India:

Pritech, Bangalore, India – OHSAS 18001 (which will transition to ISO 45001)

Paradigm, Mumbai, India - OHSAS 18001 (which will transition to ISO 45001)

Although all sites globally are not certified to OHSAS 18001/ISO 45001:2018 and ISO 14001:2015, all will follow the structure of the standards and additionally, UK will follow the standards for ISO 9001 and ISO 50001 for the sites that are not certified. This is detailed further in the geography specific SOP.

The objective of these guidelines is to specify the proactive and preventative measures that will provide the degree of safety from risks identified at centres for QHSEE performance, as far as is reasonably practicable.

4. Definitions and Abbreviations

4.1 Definitions

Acceptable risk: Risk that has been reduced to a level that can be tolerated by the organisation having regard to its legal obligations and its own QHSEE policy.

Audit: Systematic, independent, unbiased, and documented process for obtaining “audit evidence” and evaluating it objectively to determine the extent to which “audit criteria” are fulfilled.

Continual improvement: Recurring process of enhancing the QHSEE Management System, to achieve improvements in overall QHSEE performances, consistent with the organisation’s QHSEE Policy.

Corrective action: Action taken to eliminate the cause of a detected nonconformity or other undesirable situation to prevent recurrence.

Environment: Surroundings in which an organisation operates, including air, water, land, natural resources, flora fauna, human beings and their interrelation.

Note: Surroundings in this context extend from within an organisation to the global system.

Environmental Aspects: Elements of an organisation’s activities, products or services that can interact with the environment.

NOTE: A significant environmental aspect (SEA) is an environmental aspect that has or can have a significant environmental impact.

Environmental Control Measures / Operational Control Measures: This is a documented procedure, which shall be established and maintained to cover situations where their absence could lead to deviations from the existing environmental policy and its objectives and targets.

Environmental Impact: Any change to the environment, whether, adverse or beneficial wholly or partially resulting from an organisation’s activities, products, or sources.

QHSEE Management Programme: This plan is a derived action plan for achieving the geography-related QHSEE objectives and targets by explaining the responsibility and time frame required to achieve at each relevant function and level of the organisation.

QHSEE Core Team: The employees or stakeholders who are responsible for the maintenance of the management system.

Centre Management: That part of the overall management leads/representatives responsible for managing and maintaining the resources and processes by planning activities, responsibilities, practices, procedures, processes, and resources for developing,

implementing, achieving, reviewing, and maintaining the QHSEE policy at the centre.

Hazard: Source, situation, or act with a potential for harm in terms of human injury or ill health or a combination of these.

Hazard identification: Process of recognizing that a hazard exists and defining its characteristics.

Integrated management System: This is a combined management system developed to achieve Quality, Environment, Energy, Occupational Health and Safety of the centres. It is a developed and documented procedure, periodically reviewed as part of continual improvement. Integrated Management System is established under the guidance ISO 14001 (Environment) and ISO 45001 (Occupational Health & Safety), ISO 50001 (Energy) and ISO 9001 (Quality), where applicable. The Integrated Management System is periodically audited through the internal audit team and the external certifying agency. External continuing assessments are conducted annually to maintain certification on a 3-year cycle with our external certifying agency.

Ill health: Identifiable, adverse physical or mental condition arising from and/or made worse by a work activity and/or work-related situation.

Incident: Work-related event(s) in which an injury or ill health (regardless of severity) or fatality occurred or could have occurred.

Interested party: Person or group, inside or outside the workplace, concerned with or affected by the Occupational Health and Safety Management System performance of an organisation.

Non-conformance: Non-fulfilments of a requirement

Occupational Health and Safety (OHS): Conditions and factors that affect or could affect the health and safety of employees or other workers (including temporary workers and contractor personnel), visitors and any other person in the workplace.

Occupational Health and Safety Management System: It is a management framework that allows FSL to consistently identify and control its occupational health, safety and environment risks to reduce the potential accidents, injuries, and helps in achieving compliance with health, safety and environment legislation and requirements from management and other interested parties.

Occupational Health and Safety objective: Occupational Health and Safety Goals, in terms of Occupational Health and Safety performance that an organisation sets itself to achieve.

Preventive action: Action to eliminate the cause of a potential nonconformity, or other potentially undesirable situation, to prevent occurrence.

Prevention of pollution: Use of processes, practices, techniques, materials, products, services or energy to avoid, reduce or control (separately or in combination) the creation, emission or discharge of any type of pollutant or waste, to reduce adverse environmental impacts.

NOTE: Prevention of pollution can include source reduction or elimination, process, product or service changes, efficient use of resources, material and energy substitution, reuse, recovery, recycling, reclamation, and treatment.

Risk: Combination of the likelihood of an occurrence of a hazardous event or exposure(s) and the severity of injury or ill health that can be caused by the event or exposure.

Risk assessment: Process of evaluating the risk(s), arising from hazard(s), considering the adequacy of any existing controls, and deciding whether the risk(s) is acceptable.

Workplace: Any physical location in which work-related activities are performed under the control of the organisation.

NOTE: When considering what constitutes a workplace, the organization should take into account the QHSEE effects on personnel who are, for example, travelling or in transit (e.g. driving, flying, on boats or trains), working at the premises of a client or customer, or working at home.

4.2 Abbreviations

Global CAO	Global Chief Administration Officer
FSL	Firstsource Solutions Ltd – and all it’s subsidiaries
IMS	Integrated Management System
ISO	International Organisation for Standardization
SOP	Standard Operational Procedure
SMART	“Specific, Measurable, Achievable, Realistic and Time-bound”
SEA	Significant Environmental Aspect
OHS	Occupational Health & Safety
QHSEE	Quality, Health, Safety, Environment & Energy
HIRAC	Hazard Identification, Risk Analysis & Controls
AI	Aspect Impact
MCB	Miniature Circuit Breaker
ELCB	Earth Leaking Circuit Breaker
ERM	Enterprise Risk Management
RO Plant	Reverse Osmosis Plant
ACM	Annual Contract Maintenance

5. Reference Documents

The following documents are referred while preparing the Outline Occupational Health Safety & Environment Plan. The latest revision of the referred documents is as mentioned below.

Table - 1 (Referred Documents)

S. No	Description of Document	Reference No.
1	Occupational Health & Safety management System	BS OHSAS-18001:2007
2	Environmental Management System	ISO 14001:2015
3	Occupational Health & Safety Management System	ISO 45001: 2018
4.	Quality Management System	ISO 9001:2015
5.	Energy Management System	ISO 50001:2011/2018

6. QHSEE Management System Elements

6.1 General Requirements:

A designated team within each geography shall establish & maintain the Management system that satisfies to all the requirements in line with ISO 14001:2015 & ISO 45001:2018 and for the UK, ISO 9001:2015, ISO 50001:2011 BS OHSAS 18001:2007 requirements.

FSL has a Corporate QHSEE policy defining its organisational contribution in QHSEE commitment, protection & development enclosed as Annexure 1.

6.2 Planning - Identification, Risk Assessment & Determining Controls

A) Hazard identification, risk assessment & determining control

Prior to start of activities or during the due course of activities, the QHSEE core team shall carry out the Risk Assessment exercise in each of its activities with the help of well-defined procedure for **Hazard Identification and Risk Assessment (HIRA)**. Depending upon the risk level of each hazard, appropriate control measures will be proposed/ revised in daily standard operational procedures keeping in view of various legal & other requirements, specifications, and contractual requirements.

The designated regional team shall maintain the relevant documentation, data & records concerning the identification of hazards, assessment and control of risks up to date with respect to ongoing activities and also extend them to cover new developments & new or modified activities, before they are introduced.

Review of hazard identification, risk assessment & risk control:

The hazard identification, risk assessment, & risk control process should be reviewed periodically at least annually. The period may vary depending upon the following considerations: -

1. Nature of the hazards.
2. Magnitude of the risk
3. Changes from the normal operations.
4. Changes in raw materials, chemicals etc.

Procedure: Hazard Identification & Risk Analysis procedure

B) Aspect Impact

Before the start of activities during the due course of activities, the QHSEEE core team shall carry out the Aspect Impact exercise in each of its activities with the help of a well-defined procedure for Environmental Aspects, Impacts and its Evaluation (AI). Depending upon the impact level of each environmental aspect, control measures will be proposed/ revised in the daily standard operational procedures, keeping in mind various legal & other requirements, specifications and contractual requirements.

Procedure: Environmental aspect & impact identification & evaluation procedure

6.3 Legal & Other Requirements

The designated regional teams shall identify and follow the various legal and other statutory requirements applicable to their geography during execution for management system requirements and keep the Legal Register up to date as required in line with the ISO standards and government guidelines. This is detailed further in the geography specific SOP.

The designated team should also identify and update other requirements and comply with these applicable requirements during activities carried out.

Here, other requirement means requirements by Contract agreement, Business partners, Local Administrative bodies, Local NGO etc.

Procedure: Identification, Maintenance & Reviewing of Legal and Other Requirements Procedure

6.4 Objectives and Targets

The QHSEE objectives and targets will be determined and set at a geographical level and will be stored within the relevant management system with individual and global objectives and targets where necessary.

7. Implementation & Operation

7.1 Roles and Responsibilities

Roles and responsibilities will be defined within each regional management system's roles and responsibilities SOP. These may include global responsibilities but will be determined regionally and updated accordingly. Each regional SOP will outline the requirement for senior managers to be responsible for the management systems.

7.2 Competence, Training & Awareness

FSL is committed to training all its employees in the appropriate use of its Quality, Occupational Health & Safety, Environment and Energy management systems, strengthening its management through updating of professional and managerial skills, fostering diversity, and emphasising employee evaluation and motivation. In each geography, the designated team should also conduct and evaluate training for performing hazard identification, risk assessment & risk control measures. All contractors on sites will be required to provide evidence of competency, risk assessments, method statements and any additional relevant documentation before commencing work.

7.3 Communication, Participation and Consultation

In line with the requirements of ISO 45001, FSL is committed to ensuring clear communication, participation and consultation with all employees. The methods of communication and any prior meetings will be managed separately at each geography or as mentioned in detail in the relevant geography-specific SOP.

Procedure: Communication & Participation Procedure

7.4 Standard Operational Controls

The Standard Operational Control and respective procedures shall be derived from Risk assessments, controls and aspect impacts forms for different activities for safe & environment friendly operation which shall be implemented during execution of work. These assessments will vary across the geographies.

Apart from the below mentioned, the general practices and system to be followed for a safer work environment are as follows:

- All the workers shall be provided management system training (Induction training on applicable standards) on the first day before work.
- Technical inputs and behaviour-based safety training will be provided to all personnel to enhance their safety performance.
- A periodic centre inspection shall be adopted to monitor the QHSEE performance.
- Periodic QHSEE audits shall be conducted as per the internal audit procedure & plan.

- Procurement or purchase of equipment and contract shall adhere to QHSEE requirements and shall satisfy the QHSEE performance.

For Setting up the Standard Operational Control the Centre activities should refer the following general guideline in their respective activities.

7.4.1 Housekeeping

- It is everyone's responsibility to maintain cleanliness on sites, and employees are encouraged to clean as they go
- Keep the centre free from the risk of fire, Bio-chemical Hazard by keeping and maintaining the housekeeping at the best level.
- Use all the Personal Protective Equipment such as hand gloves, nose mask, etc
- Keep work areas and storage facilities clean, neat, and orderly.
- Do not place supplies on top of lockers, boxes, or other moveable containers at a height where they are not visible from the floor and near the heat sources.
- Keep all aisles, stairways, passageways, exits and access ways to buildings free from obstructions at all times.
- Clean and clear all spilled lubricants & water immediately.
- Keep danger sign boards against the danger of wet floor, broken floor, etc
- Eating will not be permitted on any of production floors unless this has been approved by operations or due to unforeseen circumstances, including but not limited to, pandemic or other emergency, at which time operations will communicate the approval by SPOCs.
- Store safely empty boxes, paint container, wastepaper, tools or other equipment which shall have a potential to create a hazard like spillage, fire and injury.
- Clear off all the accumulated wastage material at regular intervals.
- Storage areas should be kept free from accumulation of materials that cause tripping, fire, explosion, or the harbouring of rodents and other pests.
- Stored material should remain 18" below the plane of the sprinkler heads, or 24" below the ceiling in areas without automatic sprinkler systems.
- Store all cleaning materials and chemicals as per prescribed standards. These materials should be stored in proper storage with correct, clear, visible labelling.
- MSDS (Material Safety Data Sheet) for every stored and used material must be provided by the service provider to ensure the usage of environment-friendly cleaning material.
- Keep the Material safety data sheet readily available to the store owner.
- Display the contents/instructions of identified hazardous chemicals from the MSDS near the storage area.
- Provide training for the MSDS and best storage and housekeeping practices to housekeeping employees.
- Make sure sharp tools, paints, pesticide containers and other hazardous items are properly stored.
- Use ISI standards, sound and fault free equipment which should be intrinsically safe & avoid any kind of injury to the equipment operator.

- Also, before using these equipment clearances should be obtained from the facilities engineering maintenance team.
- If worker has to work at height endangering his life shall be provided with inspected fall protection gears and training shall be imparted to use these gears such as Full body harness, Ladders, platforms, etc.
- All the identified and marked dustbins should be covered and cleared time to time.
- The collected garbage should be packed in bags and should be carried using a trolley to the dump yard. All possible personal protection will be used during these operations and all the garbage will be disposed to a proper government licensed vendor only.
- Collection & Disposal of garbage should be done as per Waste Management Policy

Procedure: Waste Reduction, Reuse and Recycling & Disposal Management procedure

7.4.2 Cafeteria, Food & Beverage Services

a) Hygiene

- Keep the centre free from the risk of disease outbreaks by keeping and maintaining the hygiene at the best level.
- The canteen management will take proper hygienic measures, and all employees should adhere to the upkeep of the cafeteria at all times.
- The medical fitness certificate of cooking and serving employees shall be submitted to the admin team at regular intervals.
- Proper hygiene care should be taken while serving the food, such as wearing caps, gloves, etc.
- Food will be stored in a properly cleaned & maintained refrigerator as per the standards.
- Equipment used in cafeteria shall confirm to at the relevant standards.
- Random audits are made at our vendor's kitchen to check any service/ hygiene/ maintenance related deviations as per the standard audit checklist.
- Audits have to be conducted in presence of QHSEE/ Food committee member/s and HR SPOC at the vendor's kitchen.

b) Water and Food Analysis Reports

- Food served at Cafeteria & Drinking Water (Packaged or RO plant water) served to Employees should be tested at regular intervals to ascertain fitness for human consumption. These tests should be conducted at certified laboratories which are fully equipped to conduct Food/ Water analysis.
- Food & Water samples should be taken on random basis without giving any prior intimation to concerned vendors.
- Drinking water would be provided through packaged water cans, water coolers or through RO plants available within Office premises, wherever applicable.

- Drinking water test are to be done from accredited and authorized laboratory as per the Indian Standards.
- Food test is to be done from accredited and authorized laboratory for Pesticides, veterinary drugs residues, antibiotic residues and microbiological counts and Contaminants, naturally occurring toxic substances, heavy metals, etc per the respective Indian standards testing methodology.
- All food serving operators shall be declared medically fit against his medical fitness for suffering from infectious, contagious or loathsome disease.
- Any deviations found in the reports must be shared with the concerned vendor for further corrective measures or penalties are levied as per service level agreement with the concerned Vendor.
- All reports must be made visible at the cafeteria notice board for ready reference to all Employees.
- To ensure proper functioning of RO Plant equipment, daily checks & chemical dosage would be carried out by in-house facilities team as per the standard and supplier's manual requirement.
- Preventive maintenance will be carried out by the AMC vendor on monthly basis.

c) Food Poisoning

- This shall be treated as an emergency and shall be identified in central emergency manual for defining actions and authorities.
- All the food should be taken off the serving table. Immediate medical attention has to be arranged by the admin team member on duty. Severe cases must be sent to nearby hospital by vehicles. Follow the procedure & prepare emergency plan for the same under central emergency plan.

d) Health and hygiene

- The health of the employee will be monitored by the medical incidences reported at the occupational health centre or clinic, through the sick reporting of employees, as well communications from the local health authority and news, etc
- All the employees will be made aware of the pandemic and epidemic diseases either through the training awareness or through the posters in consultation with doctor on the panel and QHSEE, this will be site specific (specific to India and Philippines geography)
- All best practices of Health and Hygiene posters should be displayed at the cafeteria and washrooms.

7.4.3 Workplace, ergonomics & Design

- Workplace design & equipment procurement & placement shall be done in line with the ergonomic requirement of the workplace & equipment taking care of Safety,

Comfort, Ease of use, Productivity / Performance, Aesthetics

- The master design layout to be developed as per the building code and regulations.
- Adequate corridors and passages are provided such that in case of emergencies, the fire escape routes are sufficient to cater to the traffic levels that need to get evacuated within the right time.
- Latest fire emergency plan layout to be maintained as per the changes & modifications on the floor.
- Design is worked out such that all the fire escape staircases are connected in an unhindered manner so that the main passage serves as the main fire escape route as well.
- Electrical, Plumbing, Smoke detector, Fire sprinkler design & location layout is kept readily available at control room & to be maintained by admin of the centre.
- Washroom counts are taken care to check if they are adequate as per the occupancy levels.
- Air-conditioned atmosphere is maintained within the prescribed comfort zone for our employees inside the workspace.
- Allocation of appropriate breakout/ recreation spaces in the floor plate which act as de-stress areas for employees.
- The center shall incorporate of medical rooms & separate gender-specific bunker rooms for our employees at the center.
- Centre shall incorporate of dry & wet pantry spaces inside the floor plate.
- Design incorporates inbuilt frisking booths, locker rooms, function specific store areas, and changing rooms inside the floor plate.
- All workstations will be set up and assessed to workstation set standards as per geography specific requirements prior to employees using the workstation.

7.4.4 Electrical Safety.

- All staff should report to the Facilities Management any damaged electrical apparatus or wiring – including plugs and cables of portable equipment, and permanent wiring.
- Only appropriately qualified/trained staff should repair electrical equipment.
- All electrical powered equipment must not be brought to the centre, unless it has been checked and approved by the functional and security centre SPOC.
- Certificates of wiring inspections, alterations and portable appliance test & calibration records will be kept readily available with centre facility manager.
- Inspection of storage of all equipment shall be done at regular basis.
- All electrical equipment, extensions will be diverted through the life & equipment saving devices such as MCB and ELCB of proper rating.
- Please ensure that electrical equipment is used safely, following the manufacturer's instructions.
- Maintain all electrical equipment as per the manual provided along with them.
- Do not overload sockets, avoid using extension leads and take care to prevent tripping hazards when laying cables.

- All electrical equipment shall be provided with grounding connections and the resistance of earth of the same shall be maintained at less than 1 Ohm per earth pit.
- Regular inspection and maintenance shall be carried out for earth pits.
- For all In-house Events that require Sound & Lighting arrangements, electrical connections & wiring activity must be carried out only with the supervision of the facilities team.
- All highly dangerous electrical activities shall be carried out with due permit procedure only.

7.4.5 Operation & Maintenance of D.G. & HVAC system.

- Information is detailed in geography-specific SOP.

7.4.6 Stacking & Storage

- Materials, equipment and any other items will be kept in appropriate storage areas. Where this is not possible for temporary reasons, the staff responsible for those materials will ensure that they are stacked tidily, to a height, which does not constitute a hazard, and in such a way that they do not impede the movement of staff, or visitors duly informed to the security in charge of the centre.
- Do not let materials and supplies that are no longer needed accumulate.
- Manual handling will be minimized with the mechanical aids & equipment.
- Wherever manual handling cannot be avoided Best manual handling awareness shall be given to the employees

7.4.7 Statutory Compliance of Floor Design

Floor designs will be completed in compliance with the relevant geographical legislation and guidance. Mentioned in detail in the specific SOP of the location.

7.4.8 Transport Safety - India Only

- All vehicles used for Employee transport would be checked for vehicle condition, Accessories & required legal documentation. Audit would be primarily conducted by the Security team & observations would be shared with the Transport Team.
- Employees using two-wheelers to commute to the office must mandatorily use Helmets for safety. Employees without helmets will not be allowed to park their two wheelers inside office premises/ penalty may be levied on such employees.
- Employees using four-wheelers to commute to office must mandatorily use Seat Belts for safety. Penalty may be levied on employees failing to wear seat belts.
- Security team may also randomly check vehicle insurance papers for validity.

- Penalty may be levied on employees without valid insurance.
- The Center Transport Team would conduct Safety Drives & Driver Training at regular intervals for the topics listed below:
 - Importance of Seat Belt usage.
 - Non-usage of Mobile Phone while driving
 - Traffic obedience & discipline
 - Driving tips during Monsoon/ Foggy weather conditions.
 - Importance of Vehicle maintenance.
 - Provision of Fire extinguisher, First Aid, etc in Vehicles

7.4.9 Waste Management and Waste Reduction

- All waste shall be segregated, such as Normal waste, Hazardous waste, Bio medical waste, Solid Waste, e- Waste etc as per the local regulations & standards
- Waste bins will be identified & placed at various & accessible locations near to waste generation.
- Due care shall be taken while handling the waste.
- The waste will be disposed of as per the regulations & acts through the authorized vendors.
- The record of the same will be maintained at the respective department.
- Practice of three R's (Reduce, Reuse and Recycle) shall be implemented to waste management.

7.4.10 Environmental Performance Management

- All environmentally impacting significant aspects shall be monitored as per the controls defined.
- When it comes to Climate Change we will, reduce our Greenhouse Gas Emissions, reduce our reliance on fossil fuels, explore or climate change vulnerability and look to finance our environmental impact.
- We will ensure that we conserve water wherever possible and other natural resources and protect biodiversity and ecosystems by complying with all relevant legislation.
- We will ensure that we do not emit toxic emissions nor pollute water courses, reduce our packaging materials and waste and ensure that all electronic waste is recycled wherever possible.
- Wherever environmental opportunities exist we will ensure we grasp these, such as green building practices, energy efficiencies and adopting any clean technology.

7.5 Emergency Preparedness & Response

As per the QHSEE Standard requirements for Emergency Preparedness & Response, the centre management needs to identify potential accidents & emergencies associated with their activities and accordingly develop central emergency

preparedness plan as per below mentioned procedure and below mentioned points

- Roles & Responsibilities of person to take charge during emergency.
- Details of actions to be taken by personnel during emergency.
- Evacuation Procedures.
- Identification & location of hazardous materials, high risk areas, situations & emergency action etc.
- Facility for communication with employees through public address system, fire alarms & other.
- Records register & Communication arrangement of emergency communication through badges (backside of badge) & initial introduction with all visitors, business partners & employees
- Availability of necessary information during the emergency e.g. Layouts (Building layout, Emergency evacuation layout, Electrical Layout, Smoke detectors layout, Fire detection system information & manual, etc.), material safety data sheet, Standard operation procedures & Contact telephone numbers of required persons & authorities to respond emergency situation.
- Further information will be detailed in the geography-specific SOP.

7.5.1 Fire Safety

- Every centre is responsible for preparation & execution of Centre Specific emergency plan as per Central Emergency Manual & Fire safety guidelines.
- In case anybody in the office premises notices any fire hazard, he/ she needs to shout “Fire” repeatedly to alert other employees or use MCP (manual call point) to activate the alarm concerned teams who would take immediate steps to stop the Fire.
- Fire Instructions can be found at reception and on all production floors.
- Names of fire marshals/wardens should be known by staff. The fire marshals/wardens are listed on each of the production floors.
- Emergency Exits, Assembly Point and Assembly Point Instructions are clearly identified by Safety & emergency signs and notices at visible locations.
- Periodic mock drills shall be conducted to gauge the effectiveness of the Emergency Preparedness and Response Plan for all identified emergencies as per the central emergency plan and the Fire safety guidelines.

a) Fire Alarm

- Testing of fire alarms will occur on a weekly basis.
- The Fire Logbook will be kept by security and monitored by the Facilities Management team for all alarms and false alarms.
- The result of each test will be properly recorded in the Fire Logbook and be available for a visiting Fire Officer.

b) Floor Plans

- Infrastructure shall provide updated floor plan layout to admin department along with handover procedure and after any alteration done on the floor.
- All updated floor plans shall be maintained at the admin departments.
- Updated Floor plans are also displayed at various locations as well as in passage areas near fire exits and main floor plan layout shall be kept at control room.

7.5.2 Medical facilities and First Aid:

- In applicable geographies:
- Centres shall maintain a dedicated emergency vehicle to serve medical emergencies as per emergency vehicle policy.
- Use of medical emergency vehicle for any medical emergency or exigency which will be judged by the transport team shift in charge or the admin lead at centre.
- Exigency of the medical emergency vehicle will be judged by the transport team shift in charge or the admin lead at centre in consultation with doctor and/or depending upon the medical emergency.
- Centre shall have at certified First Aiders at all times on site in line with the geography's regulations and guidance. Details of First Aiders for the site will be displayed at each site.
- If medical assistance beyond first aid is required, the employee will be sent to the hospital on panel or nearest as per the decision taken by the authorities mentioned in escalation matrix.
- First aid kits are held on each site with the correct first aid resources required. .
- Where applicable, only approved list of medicines to be maintained at centre as per the instructions from doctor on panel.
- Where possible and relevant, centres shall have a medical emergency room to serve medical emergencies which are handled by the qualified nurse and medical practitioner.
- The Centre will follow procedures as outlined on BCP plan. For detailed guidelines to be followed during medical emergencies, please refer Center Emergency Manual.
- All first aid incidents will be recorded in line with the geographical guidance.
- The Security Department is required to maintain a record of all injuries & report the same to center head & QHSEE department.
- Where applicable, for more information regarding Medical insurance, please refer Employee Welfare Insurance Policy.

Health Initiatives and sessions:

Health and wellbeing initiatives and sessions are initiated by the LMS team, globally and per geography and include a range of activities that are open to all FSL employees. Additional onsite initiatives take place on a regular basis and are managed by a designated on site team.

8. Documentation and Controls

Document control will be managed within each geography, in line with their own document control procedures and policies and is documented in the geography specific SOP.

9. Performance Measurement & Monitoring

As per Identifying, Framing, Implementing & Reviewing of Objectives & Targets Procedure for performance measurement and monitoring, the centre management should establish a performance monitoring system with measurable indicators defined as per the objectives and targets. The following are examples of methods that could be used to monitor QHSEE performance: -

- Systematic centre inspection using checklists.
- QHSEE Audits
- Monitoring of Objectives & targets
- Calibrated equipment

The results of measurement & monitoring shall be presented to Management at a frequency mentioned in Identifying, Framing, Implementing & Reviewing of Objectives & Targets Procedure-

9.1 Evaluation of Compliance

For Legal & other requirements and their compliance, the QHSEE team should evaluate the legal compliance periodically with respect to applicable local legal & other requirements and maintain records of the periodic evaluation as per ERM and Regulatory Compliance Reporting System.

Procedure: Identification, Maintenance & Reviewing of Legal and Other Requirements Procedure

9.2 Incident / Accident Investigation

Any incidents and accidents on site should be reported in line with the geographical processes and documentation. Further detail can be found within the geography specific SOP.

10. Internal Audits

QHSEE internal audits shall be carried out periodically throughout the year to check and monitor implementation of compliance to procedures, regulations, legislation and applicable management systems. QHSEE audit is a systematic and documented verification process of objectively obtaining and evaluating evidence to determine whether the centre confirms to the audit requirement. By systematically undertaking QHSEE audits and reporting their findings, effectiveness of the management system is measured and actions could be initiated, if required.

The trained QHSEE auditors having adequate knowledge about the QHSEE standards, shall carry out the audit. The scope of audit shall include all the activities in the centre, which are directly controlled or have an influence on FSL processes. All the clauses of ISO 14001, ISO 9001, ISO 45001 and ISO 50001 would be applicable, while carrying out the audit. During the audit, evidence is collected through interviews, examination of documents, observation of activities and conditions in the audit area. The observations during the audit are documented.

Internal audit findings are reported in the audit report as non-conformities and/or suggestions for the improvement (Observations). Also the findings from incident investigation & unsafe acts, unsafe conditions are also considered for corrective & preventive actions. The concerned centre team representatives shall close the audit findings in due course and intimate the same to the lead auditor / team leader of the audit team.

Centre QHSEE core team shall track the compliance of observations raised during audit and their sustainable implementation.

11. Management Review

Management reviews will be conducted at a geography level on an agreed periodic basis and will include senior management to review the performance of the management system.

Annexure

Quality, Occupational Health Safety, Energy & Environment Policy

We at Firstsource the Business process outsourcing unit, believe our employees are our most valuable assets and undertake all measures to safeguard them by providing a healthy & safe working environment across all our centres. We believe it is our responsibility to conduct all business activities in a responsible manner and undertake to identify and maintain our organisations work environment, free from all recognised risks to working environment as far as practicable to our employees, service providers, suppliers, business partners, community, and visitors.

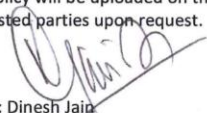

Firstsource is committed to continuously improve the Quality, Occupational Health, Safety, Energy & Environment (QOHSEE) Management considering the influences arising from internal and external context of the organisation.

To achieve the objective, we will:

- Adopt safe and environment friendly practices and work procedures across the organisation
- Quality is our main competitive advantage. Requirements and expectations of our customers must be satisfied and we strive to continuously improve our quality standards
- Comply with relevant OHSE legal requirements and other requests applicable to the organisation and strive for “beyond compliance” leadership
- Leadership at all levels are equally responsible and accountable to take proactive measures to timely remediate and correct the factors that are negatively impacting the work environment and promote the positively impacting factors towards OHSE management
- Commitment to consultation and participation
- Elimination of Risk, Prevention of ill health/ Injuries related to OHS
- Provide adequate resources appropriate to OHSE criteria in selection, placement of personnel, equipment’s, suppliers, vendors and processes
- Set strategic and appropriate objectives and targets and conduct periodic performance reviews against these targets
- Ensure OHSE awareness and build competency among associates at all levels to handle individual OHSE responsibilities through appropriate training
- Involve and consult all our Employees, vendors, suppliers, contractors, neighbouring interested parties and businesses in our OHSE mission by sharing our expectations and engaging with them to achieve our OHSE objective of ensuring a safe and sustainable upstream supply chain
- Conduct inspections, audits and mock drills to check for emergency preparedness to ensure that all process are in line with the OHSE requirement
- Communicate this policy to all employees, vendors, interested parties and stake holders
- Periodically review this policy to incorporate the changed OHSE scenarios to ensure their continuing applicability and relevance to our operations and evolving stakeholder expectations
- When it comes to Climate Change we will, reduce our Greenhouse Gas Emissions, reduce our reliance on fossil fuels, explore or climate change vulnerability and look to finance our environmental impact.
- We will ensure that we conserve water wherever possible and other natural resources and protect biodiversity and ecosystems by complying with all relevant legislation.
- We will ensure that we do not emit toxic emissions nor pollute water courses, reduce our packaging materials and waste and ensure that all electronic waste is recycled wherever possible.
- Wherever environmental opportunities exist we will ensure we grasp these, such as green building practices, energy efficiencies and adopting any clean technology.

We expect our employees and all service providers to adhere to all QOHSEE procedures and standards and to contribute effectively in implementation of this policy.

The policy will be uploaded on the Intranet and displayed at strategic locations for all employees and could be shared with interested parties upon request.
