

DEATH BY A THOUSAND INVOICES

Why growth
hurts so many invoice
finance businesses

It's never easy growing an invoice finance business. In fact, sometimes

GROWTH

can even hurt a lender's long-term prospects.

Here's how
that
HAPPENS.

In invoice finance,
you're always looking for
the right **balance between**
three central priorities.

In invoice finance,
you're always looking for
the right **balance between**
three central priorities.

- YOUR SERVICE
- YOUR RISK
- YOUR COSTS

YOUR SERVICE

You want to deliver a great client experience. But you want to service the right clients, at costs you can sustain.

Is it easy for your clients to work with you?

Can you onboard them as quickly and painlessly as possible?

Is your team responsive enough to keep them happy?

Are they happy with your average time-to-cash?

YOUR RISK

You're wrestling with a wide range of risks.

But you don't want to be so focussed on mitigating risk that you're impossible to work with.

How many
of your clients
are likely
to fail?

How long
are the credit
terms for the
majority of
your clients?

Are the
transactions
underlying your
clients' invoices
straightforward?

How soon can
you detect
fraudulent
invoices?

YOUR COSTS

You want to maintain tight control over your costs. But you've got to make sure your spend is effective.

Do your risk mitigation processes do a good enough job of limiting your exposure?

When trading ramps-up, how much will you need to spend on additional resource?

Can you keep giving your best clients the best service?

How much will you lose to fraud this year?

Invoice finance businesses thrive when they can find the right balance between service, risk and cost.

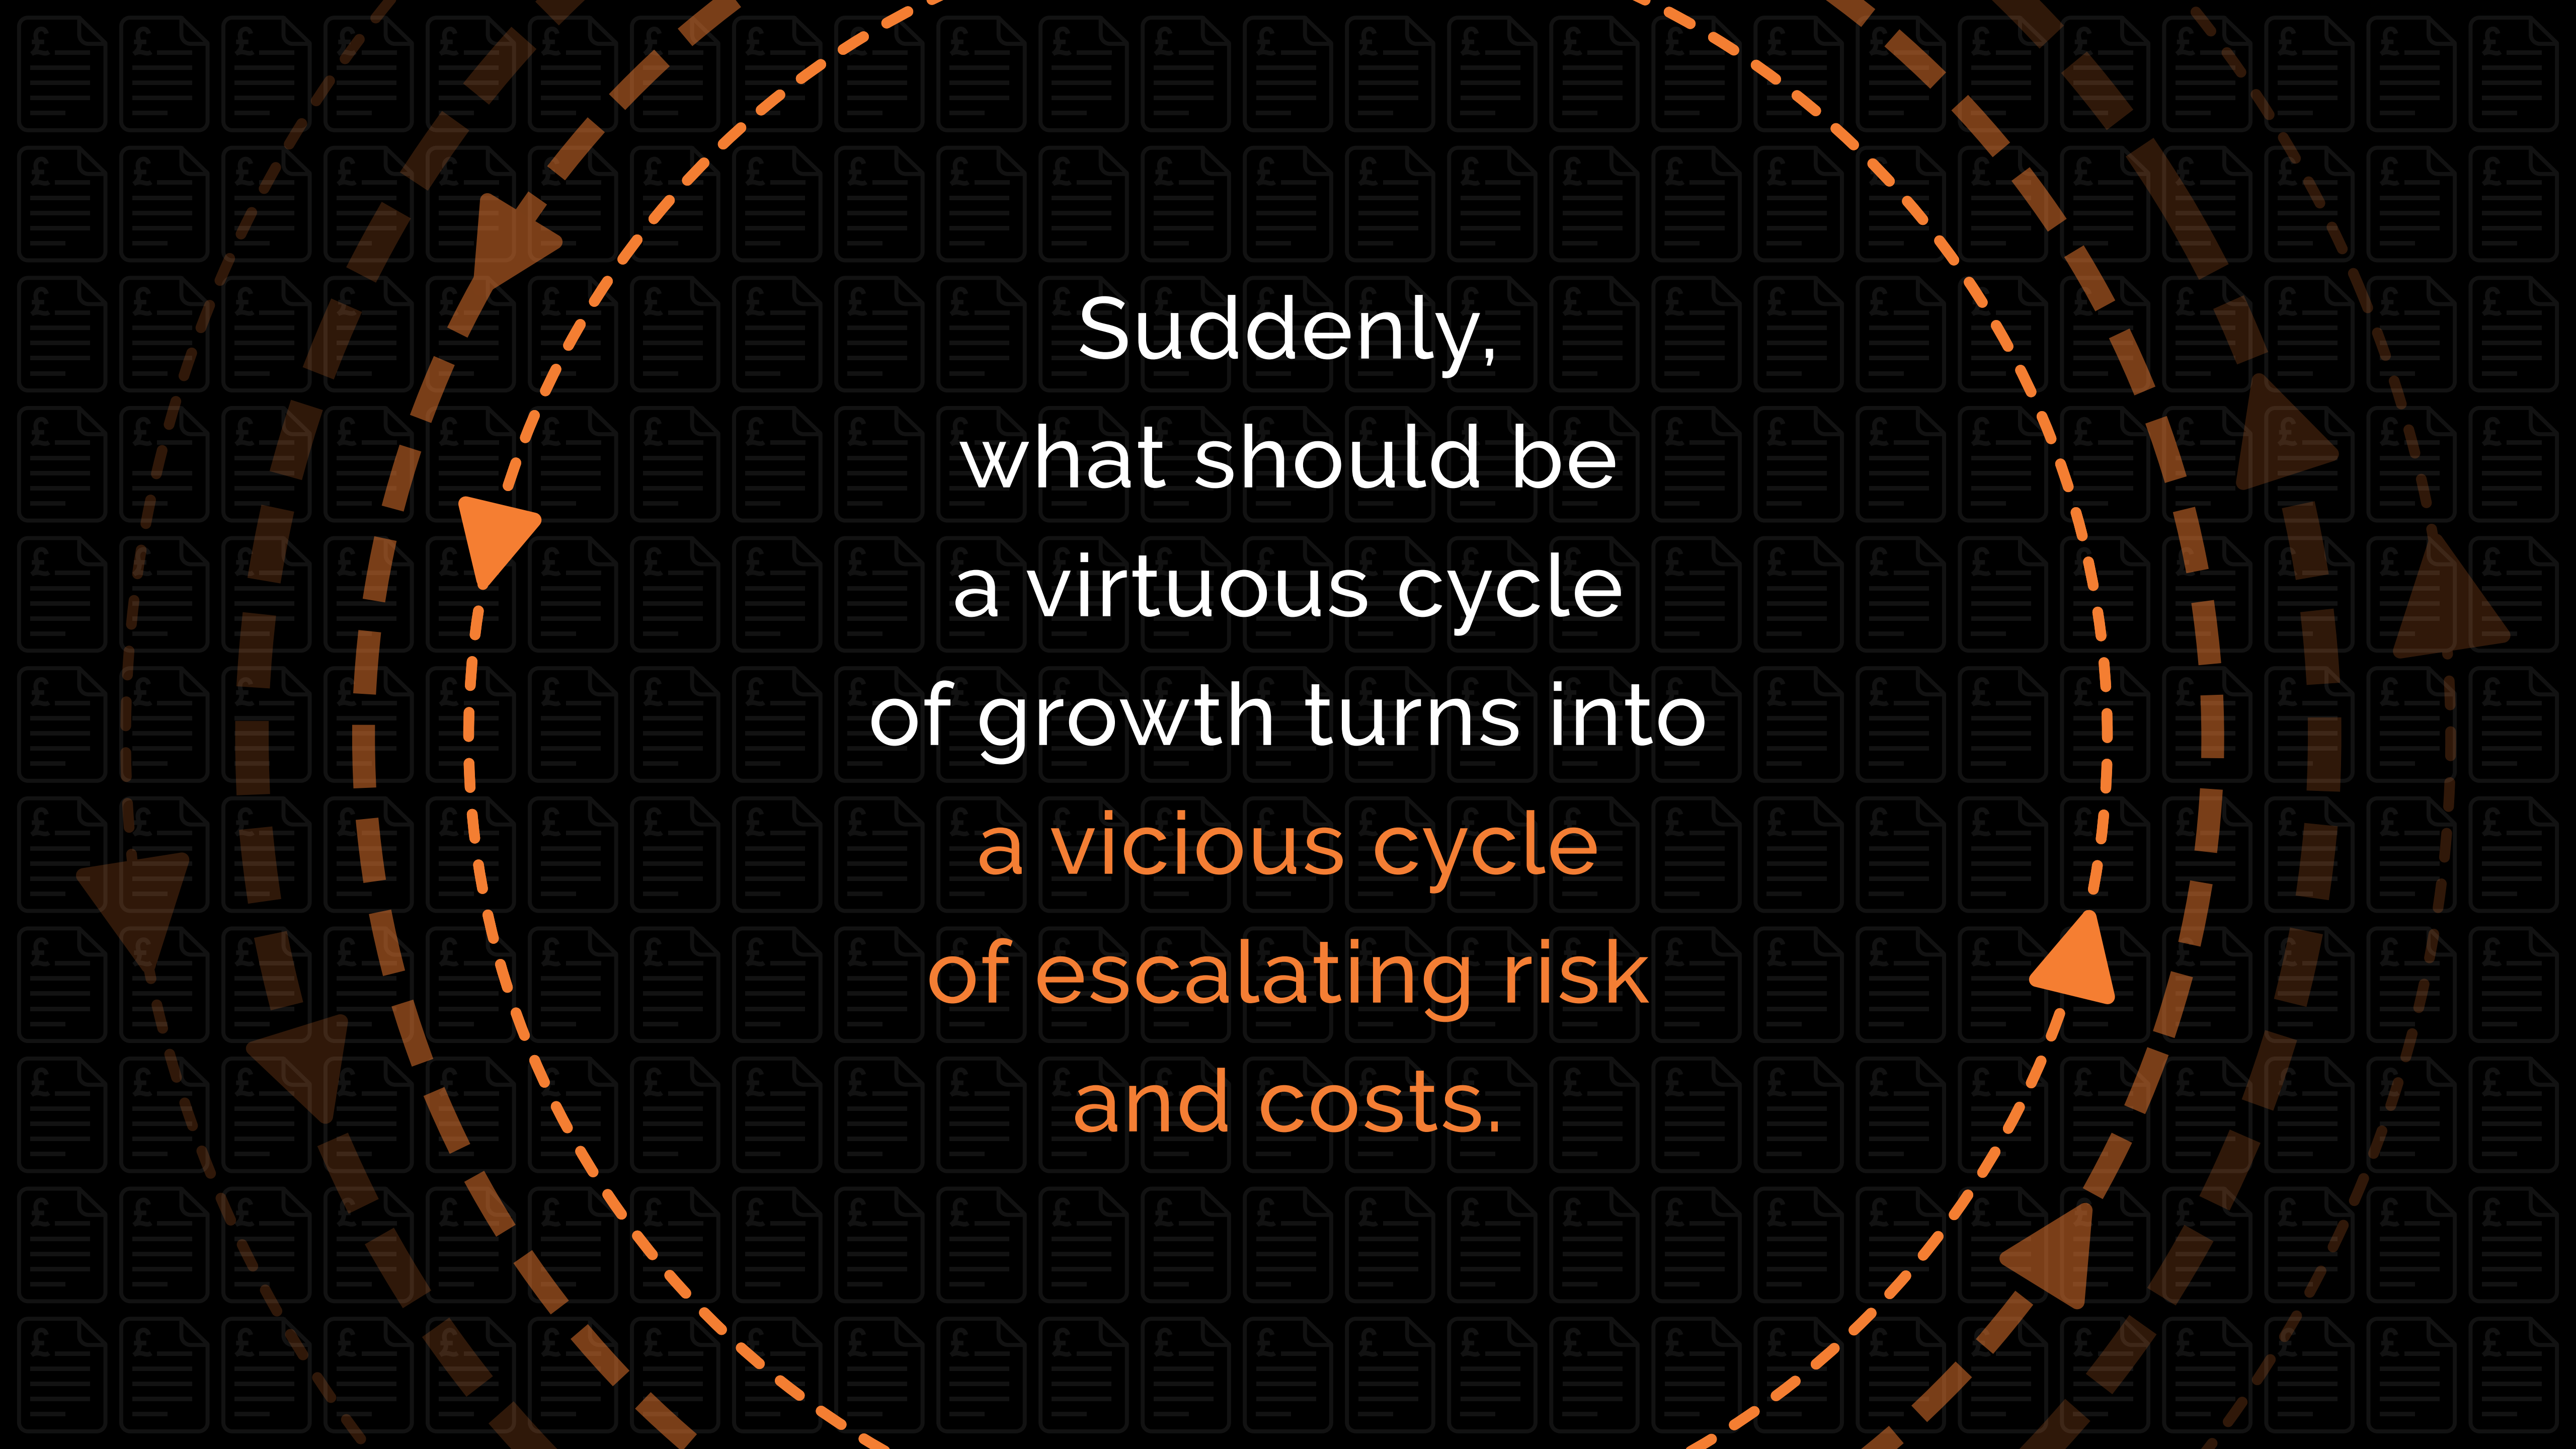

Invoice finance businesses thrive when they can find the right balance between service, risk and cost.

The problem is, when businesses try to grow without resolving these often-conflicting priorities, **everything becomes harder to manage.**

The background features a repeating pattern of small, faint document icons, each with a pound sterling symbol (£) in the top left corner. A large, circular dashed arrow in shades of brown and orange frames the central text, pointing clockwise.

Suddenly,
what should be
a virtuous cycle
of growth turns into
a vicious cycle
of escalating risk
and costs.

If your people are already stretched too thin working across disparate systems, it's now harder for them to accurately detect risk.

If your people are already stretched too thin working across disparate systems, it's now harder for them to accurately detect risk.

And even if you hire more staff, **they'll be just as limited by your technical debt.**

So, the more clients you take on,
the more pressure you put on
your operation to effectively verify
and review every transaction.

So, the more clients you take on,
the more pressure you put on
your operation to effectively verify
and review every transaction.

The more pressure you put on
your operation, the more risk
seeps through.

And then gravity kicks in

You take on
greater risk
in the name
of faster
onboarding.

You take on
bigger costs
in the name
of greater
demand.

And your customer
base becomes more
fickle the more your
team struggles to
maintain quality of
service.

So what do you

Well, you can't rip and
replace all the technology
underpinning your
operation in the name
of 'transformation'.

Well, you can't rip and replace all the technology underpinning your operation in the name of 'transformation'.

And there's no wide-eyed AI superbots that can run the business for you.

(Not yet, anyway.)

But you can use AUTOMATION to:

- Support your existing IT systems
- Speed your processes up without disrupting IT's workflow

MIN

A U T O M A T I O N L E V E L S

MAX

Because automation
sits on top of your existing
infrastructure, there is:

No disruption
to your existing
IT systems

No IT team
involvement
required

No need
to stop what
you're doing

With automation you can make sure your service, your risk and your costs don't conflict with each other so much.

By intelligently deploying automation at key points in the client lifecycle, you can improve the speed and accuracy of key processes like onboarding, verification and review.

By intelligently deploying automation at key points in the client lifecycle, you can improve the speed and accuracy of key processes like onboarding, verification and review.

Automation pulls data from the complex web of disparate systems, simplifies processes and removes manual workarounds.

Automation gives your people the data they need, quickly and in right format - meaning they are more effective at their jobs.

The result is
you can take on
MORE
CUSTOMERS
with lower risk,
at lower costs.

CASE STUDY

An invoice finance operation
in one of the UK's largest banks
servicing more than

30,000
transactions a day,

recently undertook this process of
Intelligent Automation.

They reduced risk exposure across activities by 10% **equal to over £130M a year.**

Even though they now take **75% less time to assess risk.**

They reduced risk exposure across activities by 10% **equal to over £130M a year.**

Even though they now take **75% less time to assess risk.**

They reduced **their cost to serve by 25%.**

Even though they increased **contra-check completion up to 100% (from 40%).**

They reduced risk exposure across activities by 10% **equal to over £130M a year.**

Even though they now take **75% less time to assess risk.**

They reduced **their cost to serve by 25%.**

Even though they increased **contra-check completion up to 100% (from 40%).**

They increased **their cash allocation accuracy up to 99.8% (from 98%).**

Even though allocation **efficiency increased by 20%.**

They increased **their cash allocation accuracy up to 99.8% (from 98%).**

Even though allocation **efficiency increased by 20%.**

And they improved the **accuracy of reconciliations up to 92% (from 74%)**

Even though they spend **40% less time on reconciliation.**

When you
automate your
processes,

When you
automate your
processes,

you make your
operation safer
and easier to grow.

You deliver better service at lower costs

Onboarding is quicker and your clients are grateful for it.

Automated customer outreach improves the customer experience at a fraction of the cost.

And standardised processes make it easier for your people to get the right things done.

You have a better view of risk even as you take on more customers

You run automated background checks that are both faster and more thorough on your clients, their companies and their debtors.

You get a better view of the business' true amalgamated exposure at any point in time.

And your people spend less time doing data entry and more time helping customers.

You scale revenue without scaling technical debt

Simple integrations and workflow updates help your people deliver a better client experience.

New employee onboarding is more predictable for the business and simpler for recruits.

And automation help you scale to meet new compliance requirements and customer inquiries, across new channels like email and chat.

With Intelligent Automation and simpler workflows, you can deliver a better client experience, with lower costs and a better grip on risk. All while using the IT investments you've already made.

You can make sure
the next thousand
clients you take on

You can make sure
the next thousand
clients you take on

don't break
your business's
back.

You can find a better way to

GR**OW**

We're Firstsource

We are business process experts who partner with you to understand your systems, process, decision trees and access your data – we fit our automation solution to your needs.

We help invoice finance businesses deploy Intelligent Automation to reduce repetitive, manual tasks so they can grow better, smarter and cost efficiently.

Learn how our Intelligent Automation solution helped one of the UK's largest banks reduce its annual risk exposure by £130M.
